

The WAGER 6(7) - Gambling From The Anthropological Angle

February 14, 2001

According to Rose (1986, 1995), the United States has experienced three eras of legalized gambling. The third era began in 1931 when Nevada again made casino gambling legal; it continues today (Rose, 1995). The second era took place during the Civil War and the expansion of the western frontier (Rose, 1995). Finally, the first era of legalized gambling, according to Rose (1995), swept across colonial America in the form of both government approved and private lotteries. Gambling for entertainment as well as practical purposes, however, existed even before Paul Revere and King George III.

In excerpts from her book *Gambler Way: Indian Gaming in Mythology, History, and Archaeology in North America* (1996), Gabriel (1998) writes that ancient humans tried to influence the future by means of risking something of value against it. Specifically, Gabriel (1998) asserts that ancient peoples believed that the forces of the gods controlled irregular events like weather, fertility, and famine. They also considered gambling as a means to manage these events and pacify the gods who directed them (Gabriel, 1998). For entertainment purposes, however, gambling was strictly off limits: the ancients considered it dangerous for the gamblers, their society, and the world within which they dwelled (Gabriel, 1998).

A survey of over one hundred Native gambling myths presented in *Gambler Way: Indian Gaming in Mythology, History, and Archaeology in North America* (1996) confirms gambling's supposed role in the spiritual world. According to Gabriel (1998), in gaming mythology a "hero gambler" is responsible for protecting his Native community against "superbeings." The stakes in such confrontations are high, including one's personal and biological possessions. The Native myth below illustrates this relationship.

Paviotso Myth

While hunting one day, a boy is told by a little bird that Centipede has killed all of his people through gambling, cut out and dried their hearts, and strung up all their hands together, burning the rest of their bodies.

The bird instructs the youth in how to beat the gambler. With the help of an owl and gopher, the youth wins. He throws Centipede into the fire and plants the dried hearts in the damp earth. His people are restored on the third sunrise.

While Gabriel (1998) does not present detailed descriptions of the specific games played by Natives like those described above, she does report the assertion of Greek historians that ancient mortals believed Zeus and Aphrodite could be contacted by means of dice toss. In addition, soldier-sponsored lotteries as described in the Iliad were used to implore the gods to select mortal battle champions (Gabriel, 1998). Finally, the biblical references to the “casting of lots,” argues Gabriel (1998), refers to how God’s will was determined by throwing stone dice. Specifically, in Isaiah

(34:17), dice are tossed to determine a family’s ownership of land that is consequently passed from one generation to the next. As such, the term “. . . lot refers to a portion of something, or to someone’s destiny. . . ” (Gabriel, <http://www.nmia.com/~kgabriel/myths.html>, 1998).

The preceding discussion is only a synopsis of more comprehensive bodies of work (Gabriel, 1996, 1998) that explore gambling and spirituality from a unique anthropological perspective. Perhaps with more insight into ancient gambling beliefs and practices, contemporary researchers and clinicians might acquire an historic appreciation for the positive role gambling played in some past cultures. Such an appreciation holds the potential to facilitate an improved understanding of contemporary gambling. For example, it is likely that some of gambling’s ancient character still echoes through the motivations and experiences of contemporary gamblers (e.g., level 1-3).
